Hack the Fog Sponsorship Prospectus

contact@hackthefog.com

July 10-11, 2021

Online
San Francisco

What is Hack the Cloud 2.0?

Hack the Cloud 2.0 is an online high school hackathon aimed at bringing the hackathon experience to students during this pandemic. Last year we hosted Hack the Cloud 1.0 and had 200+ participants this year we are aiming for 400+. We are based in San Francisco and will push primarily to get students from the Bay Area but since its online we are also open to applicants from anywhere.

Why sponsor us?

Our organization, Hack the Fog, hosted San Francisco's first high school hackathon in 2018 and hosted Hack the Cloud 1.0 in the summer of 2020. We have experience with hosting both types of hackathons and have a large team of dedicated high school students working hard to make this next event bigger than any of our previous events. When Hack the Fog started we wanted to provide the hackathon experience to San Francisco and Oakland students because all the hackathons were in the South Bay, now we want to continue bringing the experience to students during the pandemic in a safe responsible way. We are working to introduce more students to the world of Computer Science and help experienced students grow. We hope with our event we can setup students to start on a course to gain a career in Computer Science. But we can't do this without your help! We have high hopes aiming for 400+ students but this comes with high costs.

Who are we?

Our team is comprised of high school students from various high schools in San Francisco Unified School District. All of us haven't been to school in over a year and we are hoping to bring this event for our students who have also been stuck at home for over a year. Many on our team have gone to many hackathons and our leadership team is comprised of senior members who have hosted at least one Hack the Fog event in the past.

How can you help?

Donate money - This will give us the flexibility to ensure that all needs are fully catered for

Sponsor a prize - Incentivize hackers to work with your technologies

Provide tools for students to use - Allow students the possibility to try a large library or services to learn and grow as a Computer Scientist

Sponsorship Tiers

Tiers	Bronze	Silver	Gold	Platinum	Diamond
Amounts	**$250**	**$500**	**$1000**	**$1250**	**$2500+**
